

Global Optimization of Restructured Ga48N50

Zisheng Zhang

October 20, 2020

1. From direct BLDA sampling with random rattling of 0.1 Angstrom and Hookean pre-optimization.
2. The same-element probability penalty is set to 50%, and desorbed N₂ structures are filtered out.
3. Color code: Ga - light brown; N - blue.
4. For clarity, the constrained atoms are drawn in white, and the buffer atoms are drawn in shallow color.

#1, $E = 0.000$ eV, $\text{mag} = -0.00$

#2, $E = 0.138$ eV, $\text{mag} = -0.00$

#3, $E = 1.700$ eV, $\text{mag} = 0.00$

#4, $E = 2.704$ eV, $\text{mag} = -3.96$

#5, $E = 2.939$ eV, $\text{mag} = 0.00$

#6, $E = 3.139$ eV, $\text{mag} = 0.06$

#7, $E = 3.335$ eV, $\text{mag} = 2.57$

#8, $E = 3.342$ eV, $\text{mag} = 2.00$

#9, $E = 3.358$ eV, $\text{mag} = -0.00$

#10, $E = 3.468$ eV, $\text{mag} = 2.00$

#11, $E = 3.507$ eV, $\text{mag} = -0.00$

#12, $E = 3.600$ eV, $\text{mag} = 1.99$

#13, $E = 3.947$ eV, $\text{mag} = -0.00$

#14, $E = 4.156$ eV, $\text{mag} = 2.00$

#15, $E = 4.305$ eV, $\text{mag} = 2.00$

#16, $E = 4.396$ eV, $\text{mag} = 2.00$

#17, $E = 4.817$ eV, mag = 1.93

#18, $E = 4.953$ eV, mag = 1.76
